HOAC® TackIt.

Create your own frame - fast and easy.

HOAC® TackIt is a new aluminum profile filled on both sides with a white solid PU bar. On this PU material you either can tack textiles or thin wooden plates onto the profile or glue velcro along the edges for other attachments. The side groove of this profile allows easy connection to our HOAC® frames and stage wagons. Standard holes each 100 mm give you a lot options to hang or connect the decoration frame.

Application area

- > Wall set up for set design
- > Lining and covering with textiles
- > Mobile wall system for museum and fairs
- > Covering with projection foil
- > Circled projector screens

Profile connection steel
